

## Add Fractions Same Denominators (Fractions 04) Notes Mathforall.net

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

● Rules:

1. Bottom numbers must be the \_\_\_\_\_!
2. \_\_\_\_\_ across the top; bring \_\_\_\_\_ over.

● Write the fractions:

$$\underline{\quad} \frac{\quad}{\quad}$$

+

$$\underline{\quad} \frac{\quad}{\quad}$$

Color:

$$= \underline{\quad} \frac{\quad}{\quad}$$

$$11\frac{4}{9} + 3\frac{7}{9} = \underline{\quad} \frac{\quad}{\quad} = \underline{\quad} \frac{\quad}{\quad}$$

$$4\frac{3}{12} + 9\frac{5}{12} = \underline{\quad} \frac{\quad}{\quad} = \underline{\quad} \frac{\quad}{\quad}$$

● Steps for adding fractions:

1. Make sure fractions have \_\_\_\_\_ denominator.
2. Add any \_\_\_\_\_ numbers.
3. Add across \_\_\_\_\_; bring over \_\_\_\_\_.
4. Check: For improper fraction; change into \_\_\_\_\_ number. \_\_\_\_\_ if you can.

● Practice:

$$17\frac{4}{5} + 8\frac{3}{5} = \underline{\quad} \frac{\quad}{\quad} = \underline{\quad} \frac{\quad}{\quad}$$

$$6\frac{3}{8} + 7\frac{7}{8} = \underline{\quad} \frac{\quad}{\quad} = \underline{\quad} \frac{\quad}{\quad} = \underline{\quad} \frac{\quad}{\quad}$$
