

## Adding Fractions Different Denominators (Fractions 05) Notes Mathforall.net

- Why do we need the same denominators? And shapes?

- We will use \_\_\_\_\_ fractions to make the denominators the same.

$$\begin{array}{r} \frac{2}{4} \quad \rightarrow \quad \underline{\hspace{2cm}} \\ + \frac{3}{8} \quad \rightarrow \quad \underline{\hspace{2cm}} \\ \hline \end{array}$$

4, 8

Draw your rainbows and equivalent fractions.

$$\begin{array}{r} 7\frac{5}{9} \\ + 10\frac{2}{15} \\ \hline \end{array}$$

\_\_\_\_\_, \_\_\_\_\_  
 $15 \times 2$  or  $15 + 15 =$  \_\_\_\_\_  
 $15 \times 3$  or  $30 + 15 =$  \_\_\_\_\_

- Steps in finding LCD (least \_\_\_\_\_ denominator):
  1. Circle \_\_\_\_\_ denominator.
  2. Do other denominators \_\_\_\_\_ it?  
 If yes, you found the \_\_\_\_\_!  
 If not, go up again by your \_\_\_\_\_ number.  
 (multiply by \_\_\_\_\_ or add it to itself)
  3. Do other denominators go into that?  
 Yes, winner!  
 No, keep going up by \_\_\_\_\_ # until you get a winner.

- Find the LCD of:

$$4\frac{5}{6}, 2\frac{2}{9}, \frac{3}{4}$$

1. \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_

2. circle biggest number

3. do 6 and 4 go into 9? \_\_\_\_\_

4. multiply 9 by 2 = 18  
do 6 and 4 go into 18? \_\_\_\_\_

5. multiply 9 by 3 = 27  
do 6 and 4 go into 27? \_\_\_\_\_

6. multiply 9 by 4 = 36  
do 6 and 4 go into 36? \_\_\_\_\_

4.  $9 \times \underline{\hspace{1cm}} = 36$

5.  $6 \times \underline{\hspace{1cm}} = 36$

6.  $4 \times \underline{\hspace{1cm}} = 36$

LCD: \_\_\_\_\_

- Practice

$$5\frac{2}{3}$$

\_\_\_\_\_, \_\_\_\_\_

$$+ 1\frac{5}{8}$$

---
